Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

```
The present sequence is human G-protein coupled receptor (NGPCR) which is a 7 transmembrane protein of G-protein coupled receptor (GPCR) super family. NGPCR is expressed in hypothalamus, foctal brain, brain, cerebellum and testis. NGPCR spans the cellular membrane and is involved in signal transduction pathways. Human NGPCR is useful for treating obssity, inflammation, immune disorders, diabetes, heart and coronary disease, metabolic disorders and cancer. NGPCR's are also used as reagents in assays for screening compounds that are useful in the therapeutic treatment of physiological and behavioural disorders. NGPCR is useful for identifying compounds that meduate NGPCR gene expression and/or gene product activity. NGPCR DNA is also useful for the diagnostic and prognostic evaluation of disorders related to NGPCR function.

Nucleotide constructs encoding functional NGPCR and mutant NGPCR variants are used in gene therapy. NGPCR probes are also useful for the identification, selection and validation of novel molecular targets for
                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       420

The present sequence is nummin of protein coupled receptor (GPCR) super family. NGPCR is expressed in hypothalamus, foetal brain, brain, cerebellum and testis. NGPCR spans the cellular membrane and is involved in signal transduction pathways. Human NGPCR is useful for treating cobesity, inflammation, immune disorders, diabetes, heart and coronary disease, metabolic disorders and cancer. NGPCR's are also used as concerning compounds that are useful in the charapeutic treatment of physiological and behavioural disorders. NGPCR is useful for identifying compounds that modulate NGPCR gene expression and/or gene product activity. NGPCR DNA is also useful for the diagnostic and/or gene product activity. NGPCR DNA is also useful for the diagnostic and prognostic evaluation of disorders related to NGPCR function.

C Nucleotide constructs encoding functional NGPCR and mutant NGPCR variants are used in gene therapy. NGPCR probes are also useful for the identification, selection and validation of novel molecular targets for

The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                 detection reagent for detecting 1000 or more for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       110 GKWPALASAHPSLHRALDTLTHATNFLNVMLQSNKSREQNLQDDLDWYQALVWSLLEGEP 169

```
The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Droscophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      detection reagent for detecting 1000 or more for elucidating cell signalling and cell-cell

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell sipanalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention siscenses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         KAGRKRGSDMVAI------FPYL-----DITWCIATKWTRHMGFCITYTSLLMK 1199
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1311
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          785 TALIRKNPPESSGNTGKSK--EETLKNRVFSLKKSHSTYDHVRDQTEESSSLPTESQEEE 842

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from prosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins

The GPCR proteins and nucleic acids are useful in the treatment and diagnosis of GPCR-related conditions. The GPCR proteins and nucleic acids are also useful for identifying modulators of GPCR proteins for use as insecticides. The nucleic acid can also be used to detect mutations in GPCR genes and gene expression products such as mRNA. AMU38932-AAU38988 represent D. melanogaster G-coupled protein receptor amino acid sequences of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   47;
                                                                                                                                                                                                                                                                                                                                                                                   This invention describes a novel polypeptide (I), functioning as a gamma-aminobutyric acid -B (GABA-B) receptor which has insecticidal activity. (I), also the nucleic acid (II) that encodes it and related vectors, host cells, antibodies and transgenic invertebrates, are used for identifying: (i) new plant protection agents, i.e. modulators of (I) with insecticidal activity, which may also be useful in human or veterinary medicine; and (ii) genes that encode polypeptides involved in assembly of functionally related GABA-B receptors in insects. This sequence represents a fruitily (Drosophila melanogaster) GABA-B receptor which is described in the method of the invention.
                                                                                                                                                                                                                                                                                                           invertebrate gamma-aminobutyric acid receptor proteins, useful in sening for potential insecticides, for plant protection or medicine,

                                                                                                                                                                                                                                                                                                                                                                                                                          4;
                                                                                                                                                                                                                                             The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher enkaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention sequences genomic DNA sequences (ABL16176-ABL30511), expressed DNA (ABB57737-ABB72072).

This invention describes a novel polypeptide (I), functioning as a gamma-aminobuytric caid = B (GABA-B) receptor which has insecticidal activity. (I), also the nucleic acid (II) that encodes it and related vectors, host cells, antibodies and transgenic invertebrates, are used for identifying: (i) new plant protection agents, i.e. modulators of (I) with insecticidal activity, which may also be useful in human or veterinary medicine; and (ii) genes that encode polypeptides involved in sasembly of functionally related GABA-B receptors in insects. This sequence represents a fruitfly (Drosophila melanogaster) GABA-B receptor which is described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New invertebrate gamma-aminobutyric acid receptor proteins, useful in screening for potential insecticides, for plant protection or medicine, also related nucleic acid -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           RSTDGTILAQKLAEEVPMDVASYLYTGDSHQLKRANCSGR-----YELAGLPGKWP--A 114

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                      New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16175) and the encoded proteins RAB57137-ABB72072).

The clone encoding this protein was isolated from Xenopus ocoyte cultures which had been injected with RNA extracted from a cerebellum sublibrary. Expression of GLU-G-R activity was assessed by voltage clamp assay. Plasmid DNA encoding GLU-G-R activity was isolated by replica-plating experiments. The protein encoded by clone 45-A was found to act as a receptor for the neuro-transmitter glutamate, and may play a critical role in the control of neurons. GLU-G-R and antibodies may be used to identify agonists and antagonists of GLU-G-R-mediated neuronal excitation and in diagnosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ---AYVCLPCREG- 398

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This sequence represents a chimeric receptor. The chimeric receptor comprises an extracellular domain, a seven transmembrane domain, and an intracellular cytoplasmic tail domain, and a sequence of at least 6 contiguous amino acids is homologous to a sequence of a metabotropic glutamate receptor (MGR), and a sequence of at least 6 contiguous amino acids is homologous to a sequence of a calcium receptor (RD). The chimeric receptor may be used for screening for compounds that bind to or modulate the activity of MGR or CR and for determining the site-of-corporate of Ractive compound. The compounds can be used in the treatment of neurological diseases and disorders. They can also be used as diagnostic agents. Chimeric receptors such as this, allow the coupling of certain functional aspects of an MGR with certain functional aspects of a CR modulate.
                                                                                                                                                                                                                                                                                                                                                                                       Chimeric receptor; extracellular domain; seven transmembrane domain; intracellular cytoplasmic tail domain; metabotropic glutamate receptor; MGR; calcium receptor; CR; mGluR; G protein-coupled receptor; neurological disease.
